

The Most Definitive, Realistic, Practical &
Environmentally Friendly #ZeroWasteToLandfill Solution

Effectively reduce waste to ash.

THE **ASHER**
www.pamaraicorp.com

THE ASHER

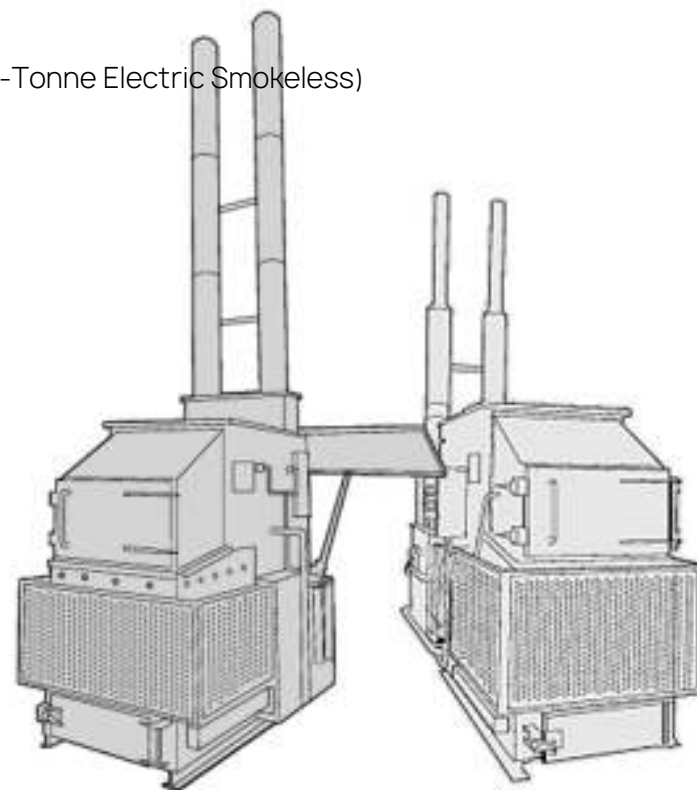

3 Capacities (2-Tonne Solar, 2.5-Tonne Electric Smokeless and 4-Tonne Electric Smokeless)

Footprint of a **typical 7-seater MPV**

Scalable & Highly customisable

Up to 80% **cheaper in CAPEX**

Up to 90% **cheaper in OPEX**

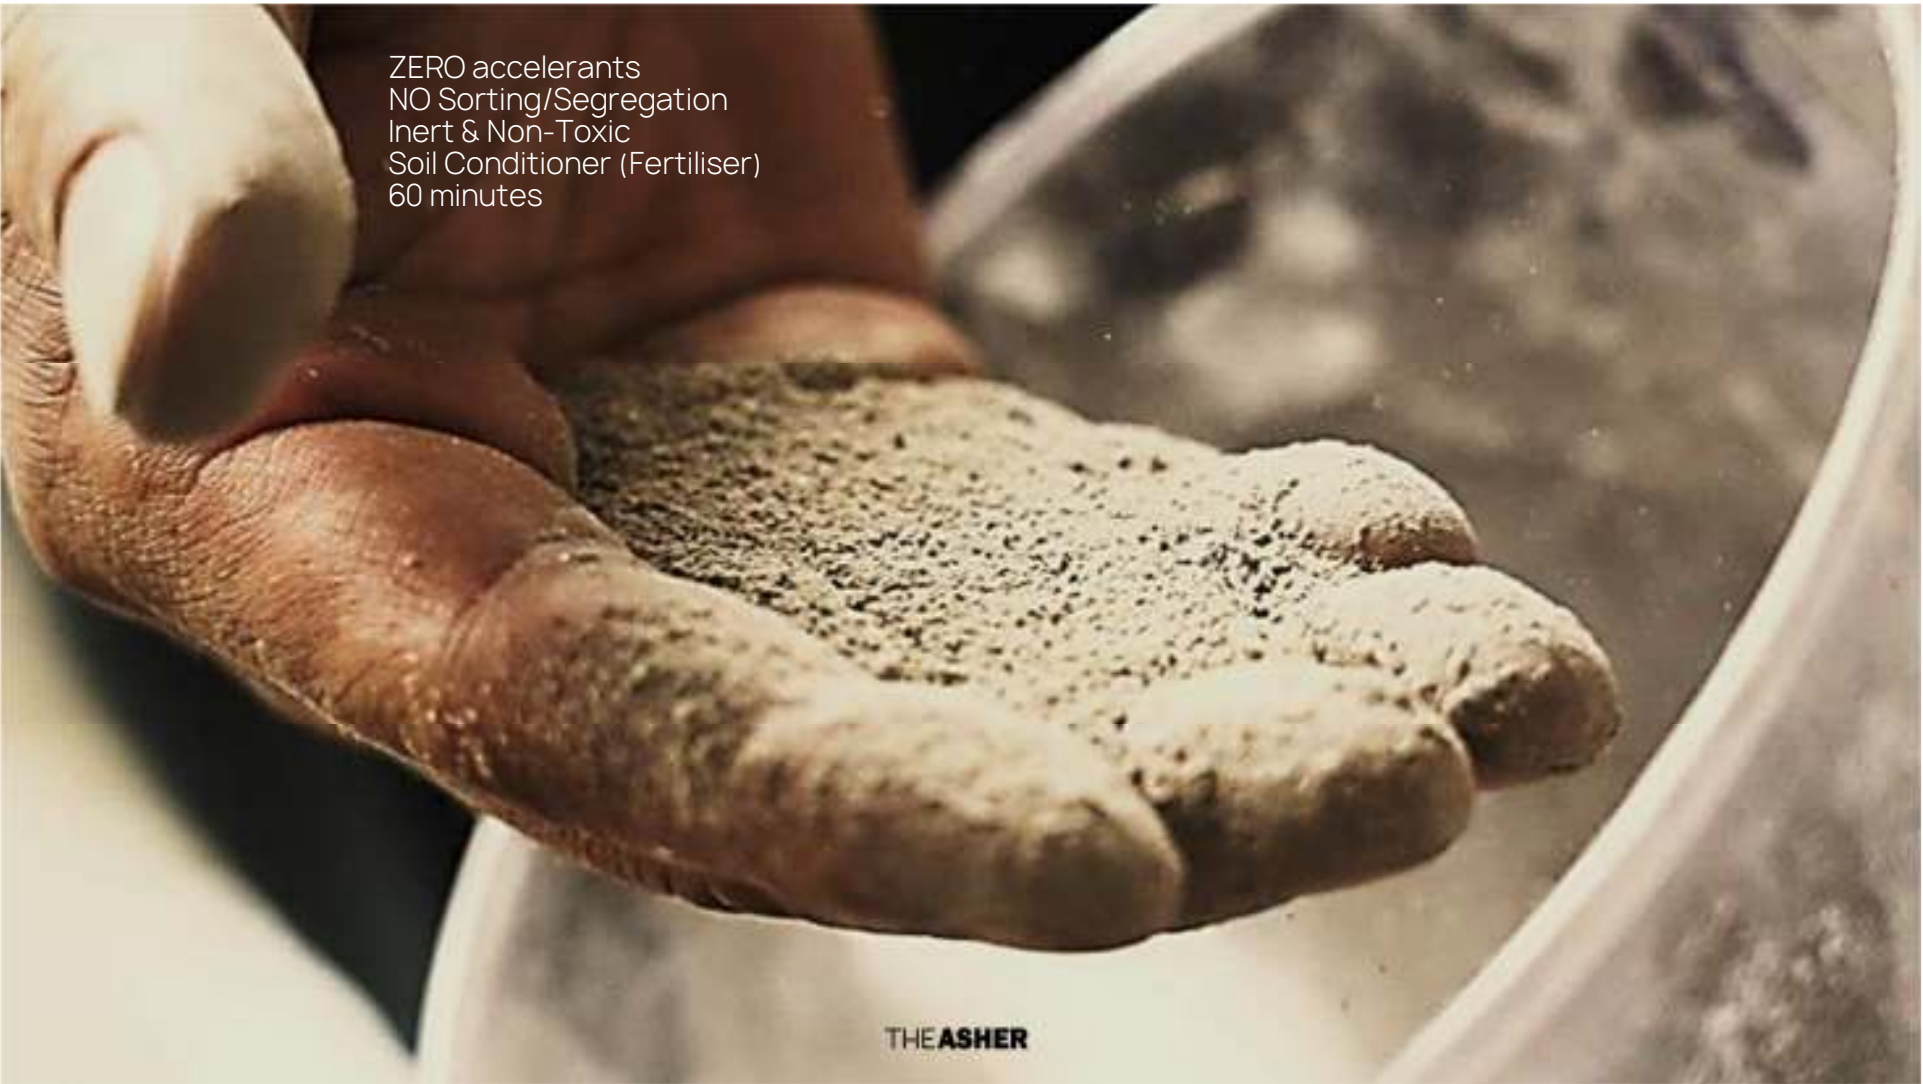

THE ASHER

Simply this.

#trash2ash **4%**

THE ASHER

ZERO accelerants
NO Sorting/Segregation
Inert & Non-Toxic
Soil Conditioner (Fertiliser)
60 minutes

THE **ASHER**

NOT REQUIRED
(Fuel, Gas, Diesel)

The Asher technology can self-generates heat...

PAMARAI

Complies Fully to the US EPA Standards

Safety emission reports from SGS, SIRIM, EXOVA, PONY & SUCOFINDO...

PAMARAI

***Automated
Plug-n-Play
Quick to Install***

THE **ASHER**

Simple & quick on-site set-up

(only electrical connection/ solar-powered & water source)..

No need for segregation or pre-sort

Minimal to nil segregation work

is required. Trash can be loaded into the Asher and treated as is.

APPLICATIONS OF THE ASHER

"Its application is only limited by one's imagination and courage.."

"Treatment at Source"

Eliminating Multi-Handling
Eliminating Transportation/Relocation
Eliminating Secondary Treatment

THE **ASHER**

FOOD WASTE*

Stop feeding the landfills.
Feed the hungry ones.

Green Hajj...

Will the vast majority of the pilgrims care about the environment?

The Hajj is said to be the largest annual gathering of people in the world. With an average of 2.5million per day, the amount of waste generated, removed, transferred and sent to the landfill is beyond imagination.

Mecca can be truly sustainable in its way of waste disposal by using the Asher to treat all the waste generated by the pilgrims during their stay for the Hajj and Umrah.

#TreatmentatSource #In-situ #ZEROWasteOut

For islands...

Why barge it when you can treat it on the island itself?

Waste do not need to accumulated, loaded & unloaded, barged and disposed at far location from the island itself. All waste can easily be collected and treated on the island of origin using the Asher; eliminating the use of boats, diesels and other materials & tools for the purpose of transferring.

#TreatmentatSource #In-situ #ZEROWasteOut

A large, dark-colored metal dumpster is shown from a high angle, filled with a large pile of discarded playing cards. The cards are scattered haphazardly, with various suits and faces visible. The lighting is somewhat dim, suggesting an outdoor or semi-outdoor setting at dusk or dawn.

For casinos...

Why take the risk?

Why risking the cards that are meant to be shredded and destroyed to be found unpunched and intact? Casinos can easily destroy and turn these changed decks of cards to ash using the Asher on site. This will eliminate the risk of the deck of cards from the casinos being effectively destroyed to ash before leaving the building.

#TreatmentatSource #In-situ #ZEROWasteOut

COVID-19...

Why take more risk?

It is estimated that each infected person generates 3.5kg of infectious medical waste per day. This has not include the waste from the test kits, PPEs and other waste coming from the quarantine and screening centres. Current method of disposal of the medical waste involves multi-handling, being relocated and expensive disposal/treatment.

The Asher can easily be placed at hospitals, quarantine centres and screening centres and can easily, safely and effectively turn the medical waste to ash, on-site.

Save the Rivers...

The river is the home to the fishes; not our waste.

River clean up can easily be accomplished by placing the Asher at the temporary trash disposal sites along the banks of the rivers. Without much efforts of recollecting and transporting to the landfills, the waste trapped and collected from the river can easily be treated using the Asher, turning the waste to ash. The villagers or residents of the river can be involved to operate, manage; directly contributing their energy and efforts to keep the river, where they reside, clean, pristine and healthy.
